

Suvankar Mitra

Senior Backend Engineer · Java · Spring Boot · Financial Systems

Bengaluru, India | suvankar.for.work@gmail.com | [linkedin.com/in/suvankar-mitra](https://www.linkedin.com/in/suvankar-mitra) | github.com/suvankar-mitra

PROFESSIONAL SUMMARY

Senior Backend Engineer and Technology Lead with 10+ years of experience building and stabilising mission-critical financial systems at Goldman Sachs (via Infosys). Deep expertise in Java, Spring Boot, SQL performance engineering, and large-scale system modernization on AWS-hosted infrastructure. Designed production-critical systems including a 5TB+ database archival architecture, a trade identifier life-cycle solution preventing settlement halt. Independently builds modern Java 21 / Spring Boot 3.x applications with REST APIs, JWT auth, and PostgreSQL. IEEE-published researcher. Open to Senior Backend Engineer, Tech Lead, and Architect roles across fintech, banking tech, and product companies.

TECHNICAL SKILLS

Languages	Java 21	Shell Script	SQL	T-SQL	C
Frameworks & APIs	Spring Boot 3.x	Spring Security	Spring Data JPA	REST APIs	JWT
Databases	PostgreSQL	Sybase ASE	Query Optimisation	Execution Plans	Data Archival
DevOps & CI/CD	GitLab CI/CD	IaC	Git	Flyway	Maven
Infrastructure	AWS (hosted)	Linux RHEL 7/8	Cloud Migration	DevContainer	
Practices	System Modernisation	Incident Management	Root Cause Analysis	Agile	SDLC

PROFESSIONAL EXPERIENCE

Technology Lead

Dec 2015 – Present

Infosys Ltd. (Client: Goldman Sachs, Bengaluru)

High-volume post-trade settlement platform supporting global equity and fixed-income operations on AWS-hosted infrastructure.

- Served as primary technical owner of the core infrastructure layer of a mission-critical post-trade settlement platform at Goldman Sachs — responsible for stability, performance, and continuous evolution of systems underpinning global trade settlement.
- Designed and implemented a trade identifier lifecycle management system to prevent integer sequence exhaustion — a failure that would have directly halted settlement operations across global markets.
- Architected a 5TB+ trading database purge and archival system from scratch, balancing regulatory data retention requirements with sustained query performance and storage efficiency.
- Own and operate a bi-temporal trade data snapshotting infrastructure (business as-of date × processing timestamp), enabling audit, reconciliation, and regulatory reporting at ~1.5M records/location/day during month-end.
- Reduced production incidents by 35% through:
 - SQL query plan optimisation — index analysis and forced execution plans on high-frequency trading queries
 - Automated retry logic for known transient failure modes
 - Systematic root cause analysis and elimination
- Designed and led end-to-end modernisation of 100+ legacy services — zero unplanned downtime:

- Source control migration: CVS → Git
- CI/CD pipeline implementation using GitLab
- IaC-based RHEL 7/8 cloud host provisioning and deployment automation
- Support team training and operational handover
- Built and led an engineering team of 5-7: technical hiring, knowledge-sharing sessions, junior mentoring, and end-to-end offshore-onshore delivery management.
- Developed and optimised backend services in Java and SQL supporting high-throughput transaction processing across the settlement platform.

OPEN SOURCE & PERSONAL PROJECTS

MoneyTrail (pre-release)

github.com/suvankar-mitra/moneytrail

Self-hosted personal finance REST API in active development. Java 21, Spring Boot 3.5, Spring Security (JWT), Spring Data JPA, PostgreSQL, Flyway migrations, Spring Boot Actuator. Implements double-entry bookkeeping with multi-user design. AGPL v3 licensed.

free-dictionary-rest-api

github.com/suvankar-mitra/free-dictionary-rest-api

Free, self-hostable dictionary REST API on Wiktionary data. Actively maintained. Apache 2.0 (code) / CC BY-SA 4.0 (data).
